Instructions

- Overview Link: https://youtu.be/F_jCnIMf4Hw

1. Ensure you've followed the lessons to set up your Github, git, and VS Code
2. Fill in the below tasks (note it'll save as you go)
3. Once everything is filled in, ensure you click "Submit and Export PDF"
4. Upload the PDF to Github in a Module1 folder
5. Find the downloaded PDF and move it into the location of your local repository folder (don't use the Github upload option as we want to practice the git commands)
6. Use `git add .` to track all file changes (i.e., the PDF)
7. Use `git commit -m "Uploading M1 PDF"` to record the change and provide a meaningful message
8. Use `git push origin main` to move the changes to the remote repository's main branch (Note: Future assignments will have a dedicated branch name for their work)
9. Take the same PDF and upload it to the Canvas submission

Section #1: (10 pts.) Tasks

Progress: 100%

 **Task #1 (2.22 pts.) - Screenshot of VS Code Extensions for this class**

Progress: 100%

Details:

- Ensure you have the following extensions
 - PHP Intelephense
 - WakaTime
 - Git Lens
 - MySQL Extension

 Saved: 2/7/2026 8:11:57 PM

Task #2 (2.22 pts.) - Screenshot of WakaTime Setup

Progress: 100%

Details:

- Visit the WakaTime site
- Click the "Projects" tab and find your repository and select it
- Include a screenshot of the top part that shows the overall time and the repository name
- Scroll down and screenshot the bottom portion that shows the individual files/branches and include that. (You won't need to capture the visuals)

Screenshot the bottom portion that shows the individual files/branches

Progress: 100%

- Run `php -v` in the terminal
- Run `php --ini` in the terminal
- Record the output (both should work and show proper configuration).

Progress: 100%

Task #5 (2.22 pts.) - Reflection

Progress: 100%

Details:

- Did you have any issues/problems this module? If so, what were they and how did you solve them?
- Did you learn anything new this module? If so, provide some brief details.
- If both answers were no, briefly explain your prior background.

Your Response:

One issue I ran into in this module was when I tried to set the environment path for the new version of PHP, but when I tested it in the terminal, my old version of PHP was the one being detected instead of the new version.

The issue was solved by removing the old version of PHP from the global variable in the environment path, closing and restarting the terminal and then entering "php -v" and "php -ini" to confirm that the new PHP version is selected.
